

Hi Jane and Gregory,

I hope you're both doing well.

I am writing about my part of the proposal. I am having some unexpected problems that might delay my section.

I have been trying to fix a technical issue with the web auditor software's firmware, but I am unable to solve it on my own. Issues currently facing:

- Missing packages for security testing.
- Compatibility issues with the software itself.

Since our deadline is getting close, I would really appreciate your help or at least feedback on my approach. If either of you has experience with this issue, your advice would be very helpful.

Thank you so much for your support.

Best regards,

Yuvraj Singh Gill
